

# Burger Boat Company

Burger Boat was looking to migrate from On Premise Exchange 2007 to Office 365 with a quick turn around time and low business impact. iLink analyzed and recommended that the customer upgrade the AD functional level and performed the same for the customer.

Burger Boat wanted to do PILOT testing and also hold its inactive mailboxes using litigation hold. iLink proposed a staged exchange migration approach for Burger Boat. Additionally iLink came up with a recommendation to move inactive mailboxes such that there is no license impact for Burger Boat. iLink setup the environment for Staged Exchange Migration and helped conduct PILOT testing before migrating the mailboxes in batches. The final outcome is a successful migration with zero issues and decommissioning of on premise servers – all this in a short duration of 4 weeks.

## Benefits:

- Provided AD Functional Upgrade
- PILOT Testing to ensure a foolproof solution
- iLink QA and validation to ensure zero data loss and coverage of all possible scenarios.
- Complete mailbox migration with quick turnaround time

## Technology:

- Microsoft Azure
- Office 365
- Active Directory
- Exchange
- AAD Sync
